**Rohloff SPEEDHUB 500/14 fits in all bikes with 135mm frame spacing
(The only exception: Bikes with no opportunity of mounting a rear brake)**

The Rohloff SPEEDHUB 500/14 is compatible with both quick release and bolt-on axle types. There are 2 types of gear mech: internal and external. There are 3 types of axle plates for aftermarket and OEM versions and 2 types of disc brake OEM version hubs.

All hubs are retrofitable for disc brakes. Hubs are available in Aluminum (silver), red and black.

Using the same standard system, we are able to manufacture 54 different types of hubs. With the tandem version, there are even twice as much due to larger spoke holes. Please find below the correct hub for your bicycle.

Most people will chose aftermarket hubs which are conveniently marked with article no. 'XXX'.

All other article numbers are for specific combinations. For bicycles with Horst Link, an OEM2 achsle plate, a Speedbone and if needed a brake disc will be necessary.

Cable guide (straight type) with frame clamp				
Frames without cantilever brake boss or mixt/comfort bikes need to have the cables routed along the chainstay. For this please order Art No. 8260.				
8260 -	Cable guide (straight type) with frame clamp	Each		11,50
Chain guide CC				
In certain cases, especially with full suspension bikes or in aggressive CC situations, it is possible that the chain derails. To prevent this, you may either use special chainrings or the Rohloff Chain Guide CC. For Downhill racing and similar conditions we recommend using available aftermarket chain guides.				
8290 -	Chain Guide CC	Each		46,50
Spokes for 26" wheels				
26" wheels built with the Rohloff SPEEDHUB 500/14 require a special spoke length (from 230 mm). You may give us the type of rim you intend to use or you may refer to our spoke length chart, we will deliver your hub with the correct spokes. Spokes for 28" wheels are readily available at any bike shop.
