TIRE TECHNOLOGY DEFINED

InnerPeace LowTire Pressure System

A lightweight, teardrop-shaped sidewall reinforcement with a load of real-world benefits. Run lower tire pressure for increased traction without an increased risk of pinch-flats or rim damage. Found on all WTB Team DH and Team FR tires.

DNA 40 High Grip Compound

Our new soft 40a durometer slow rebound compound used on Timberwolf Team DH & FR tires. Has the most advanced traction in loose conditions

DNA Rubber Compound

A specially formulated 60a compound found on all WTB Race and Tubeless tires. Designated by the teal DNA Strand in the tread, this race-proven compound is tacky, fast rolling and lightweight.

Dual DNA Rubber Compound

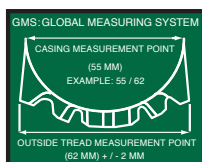

Designated by the teal and grey DNA Strands in the tread, the tacky 60a rubber center section is coupled with dense, 50a slow rebound side knobs for ultimate traction on wet roots, rocks and soil. Found on all WTB Weirwolf Team DH & Weirwolf Team FR and Team XC tires.

Super Duty Downhill Casing

This puncture and tear resistant material allows very low pressures and “fit and forget” reliability. Proven on World Cup Downhill and Red Bull Rampages competitions. Found on all WTB Team DH tires.

UST Tubeless

Designed to meet the UST/ETRTO standard. A lightweight, 120 tpi high-strength cap ply casing, foldable bead & DNA rubber compound allows for easier installation. Found on all WTB tubeless tires.
